Origins & Production Details

All of these trees have been grown from seed in the UK, have single leaders and at least 4 main direction roots and no girdling roots. THEY ARE ALL CLASSED AS FEATHERED TREES SO HAVE BRANCHES ALONG MUCH OF THE STEM ALTHOUGH THEY HAVE BEEN PRUNED DURING PRODUCTION.

Root control bags – All of the trees have been grown in the ground in root control bags. These are fabric pots that are planted in the ground with the tree and prevent any significant root growth outside of the bag. The result is that a very dense fibrous root system is produced meaning you get strong growth after planting.

- When the tree is listed with root control bag it will be supplied with the soil surrounding the root system.
- When the tree is listed bare root it will have most of the soil removed

Supply & delivery

All trees will be supplied within a co-extruded polythene bag to prevent roots drying out.

The costs **DO NOT INCLUDE** postage and packing. Costs will be provided upon request.

If you would like a tree and live in the Shropshire / Powys border area then delivery can be made for a nominal or free charge – don't hesitate to ask.

* These are sold in aid of Curlew Country <https://curlewcountry.org/> to help reverse the decline in this delightful bird by positive action with land owners and conservation organisations.
